

Contents

Introduction to Time Series Forecasting

Introduction to ARIMA Models

What does the p , d and q in ARIMA model mean?

What are AR and MA models

How to find the order of differencing (d) in ARIMA model

How to find the order of the AR term (p)

How to find the order of the MA term (q)

How to handle if a time series is slightly under or over differenced

How to build the ARIMA Model

How to do find the optimal ARIMA model manually using Out-of-Time Cross validation

Accuracy Metrics for Time Series Forecast

How to do Auto Arima Forecast in Python

How to interpret the residual plots in ARIMA model

How to automatically build SARIMA model in python

How to build SARIMAX Model with exogenous variable

Practice Exercises

Conclusion
